探洞装备包使用说明书

EQUIPMENT PACKAGE

Instructions for Use

Product Applications:

This rope bag is designed to carry ropes, safety equipment, tools, and other items during outdoor rope activities and wilderness rescue operations, with a design that facilitates easy access to ropes and equipment.

The bag is made of PVC-coated mesh fabric combined with nylon, making it abrasion-resistant and water-repellent, suitable for operations in both wilderness and urban environments. The interior features 6 attachment points, 2 rope-end attachment points, and 1 internal zippered pocket, allowing for organized storage of safety equipment. The carrying system, made from low-water-absorption cushioning material, provides good comfort during prolonged use without adding weight due to water absorption; it also features a waterproof cover.

Storage and Maintenance:

Proper cleaning and storage after use will extend the rope bag's service life and prevent premature damage. When cleaning, use lukewarm water and a soft-bristled brush to remove stains from the bag's surface. Soap, dishwashing liquid, or neutral detergents may be used; avoid organic solvents whenever possible, as they may damage the fabric and fasteners. If the bag has stubborn stains that are difficult to remove, you may gently wipe them with a small amount of organic cleaner (such as solvent, alcohol, thinner, or nail polish remover), but avoid contact with the bag's webbing, fasteners, and printed patterns. Do not put the rope bag in a washing machine or dryer, as this may damage the washing machine or the bag itself. After cleaning, the bag should be air-dried naturally to avoid accelerated aging caused by prolonged exposure to direct sunlight. Once dry, store the bag in a cool, dry place to prevent mold growth. Do not stack or pile the bags on top of each other to extend the fabric's lifespan.
